WHY ARE WE HERE?

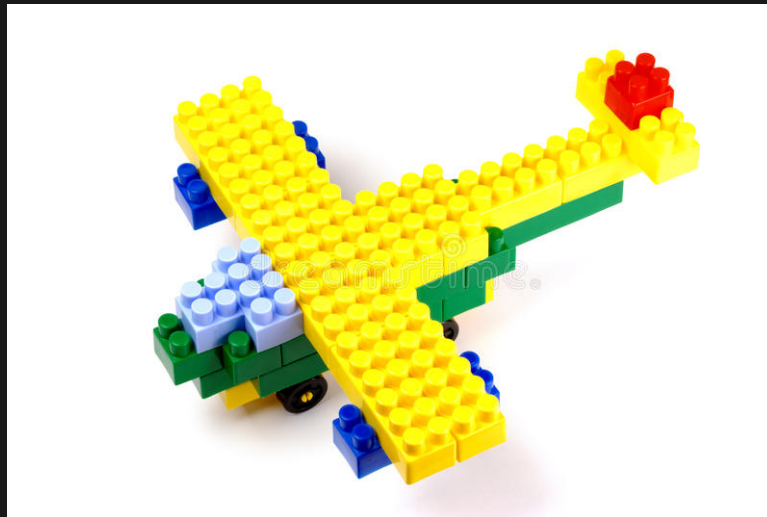

PRODUCT LIFE MANAGEMENT (PLM)

PRODUCT LIFE MANAGEMENT (PLM)

Bill of Materials (BOM)

TOPIC-BASED CONTENT

TOPIC-BASED CONTENT

The PLM world loves DITA — BOMs make excellent topics

BUILDING DOCUMENTS FROM TOPICS

A (VERY QUICK) DITA REFRESHER

TOPICS

```
<topic id="topic_fjt_3bt_2tb">  
  <title>Topic A</title>  
  <prolog>  
    <author>Mark Up</author>  
  </prolog>  
  <body>  
    <p>Topic content.</p>  
  </body>  
</topic>
```

MAPS

```
<map id="id-map-AtoE-nested">
  <title>Topicrefs A to E Nested</title>
  <topicref
    href="topicA.dita"
    navtitle="tref A, level 1">
    <topicref
      href="topicB.dita"
      navtitle="tref B, level 2">
        <topicref
          href="topicD.dita"
          navtitle="tref D, level 3"/>
        <topicref
          href="topicE.dita"
          navtitle="tref E, level 3"/>
        </topicref>
      </topicref>
      href="topicC.dita"
      navtitle="tref C, level 2"/>
    </topicref>
  </map>
```

PUBLISHED TABLE OF CONTENTS

Contents

Chapter 1. Title A.....	3
Title B.....	3
Title D.....	3
Title E.....	3
Title C.....	3

REUSE

```
<map id="id-map-AB-siblings">  
  <title>Topicrefs A and B As Siblings</title>  
  <topicref href="topicA.dita" navtitle="tref A, level 1"/>  
  <topicref href="topicB.dita" navtitle="tref B, level 1"/>  
</map>
```

Inheritance? Really??

WHAT'S WRONG WITH THIS PICTURE?

- Map XML tree to non-XML (incompatible) model
- Mapping language
 - Not very powerful
 - Syntax leads to misunderstandings
 - Used for every decompose/compose
- XML hampered by non-XML limitations

**FOR EXAMPLE, UNMAPPED CONSTRUCTS IN A
BOOKMAP**

FOR EXAMPLE, UNMAPPED CONSTRUCTS IN A BOOKMAP

```
<bookmap>
  <booktitle>
    <mainbooktitle></mainbooktitle>
  </booktitle>

  <frontmatter>
    <booklists>
      <toc/>
      <tablelist/>
      <figurelist/>
    </booklists>
  </frontmatter>

  ...
</bookman>
```

FOR EXAMPLE, DITA PROFILING ATTRIBUTES

FOR EXAMPLE, DITA PROFILING ATTRIBUTES

```
<p platform="val1 val2 val3">...</p>
```

FOR EXAMPLE, DITA PROFILING ATTRIBUTES

```
<p platform="val1 val2 val3">...</p>
```

Internally @platform is an array, so
decompose/compose both require tweaking

```
<p platform="val1, val2, val3">...</p>
```

FOR EXAMPLE...

Etc
